

CRYPTO*in*Q

All right guys, so it's that time of the cycle where it's time to research and start thinking about what you want to buy for next cycle and H bar is a coin that's on my list I'm not saying I'm going to buy it, but it's definitely one that I like because I like DAG technology I've been a big fan of DAGs Phantom is my favorite DAG and I just think DAGs are faster than the typical blockchain I mean, it takes the data in parallel, so it's not sequential So it's just way faster, guys And one of the issues I had with H bar in the past is that the code was in public and they only allowed these corporations to run nodes So it was a closed project and it was permissioned, but that has changed and they have amazing partnerships with Google, Boeing, LG, just look at the chart behind me They have amazing partnerships They've opened up their code and now anyone who meets their requirements that they have can run a node on H bar So now I think it's a project that I would consider holding for next cycle What do you think? Are you a fan of Hedera? Do you like H bar? You know, Phantom is still my favorite DAG, but H bar, guys, it's on

the list right now It's on the list. 0

<https://www.tiktok.com/@cryptosteve100x/video/7171529699590524203> How much will 1 Bitcoin be worth in 2030? It is difficult to predict the exact value of Bitcoin in 2030, as its price is influenced by various factors such as market demand, adoption rate, regulations, and technological advancements. Some analysts and experts believe that Bitcoin could reach a value of \$500,000 or even \$1 million by 2030, while others think it could remain more stable or experience a different trajectory. Ultimately, it is important to consider that the cryptocurrency market is highly volatile, and any prediction should be taken with caution. How much is \$1 Bitcoin in US dollars? The value of \$1 worth of Bitcoin in US dollars can vary depending on the current exchange rate. As of October 2021, the value of \$1 worth of Bitcoin is approximately \$57,000 USD. Is Bitcoin OK to invest in? As with any investment, there are risks associated with investing in Bitcoin. Some potential risks include price volatility, regulatory uncertainty, security concerns, and the potential for loss of funds. It is important to do thorough research and consider your own risk tolerance before investing in Bitcoin or any other cryptocurrency. Consulting with a financial advisor can also be helpful in making informed investment decisions. How many people own 1 Bitcoin? It is difficult to determine the exact number of people who own 1 Bitcoin as cryptocurrency ownership is pseudonymous and many individuals may hold their Bitcoin in multiple wallets or on exchanges. However, it is estimated that there are around 2.5 million Bitcoin addresses holding at least 1 BTC. This number includes individual holders as well as exchanges, wallets, and other entities.
